ACOUSTIC
SIGNATURE
MADE IN GERMANY

We are so pleased to bring these fine turntables to the U.S. market! Earlier this year we embarked on a mission to fill the void in our product line that so desperately required our attention. We've had turntables in our product offering for as long as Fidelis has been around. A long time! Now it was time to have a line up of turntables capable of meeting our requirements of offering price point and quality throughout a full range of design elements and rock solid build quality.

We found what we were looking for in Munich at the great audio show they have there. It was there we met Gunther with his amazing display of turntables. We had found our grail! These turntables are built in Germany, super quiet, with quality components to bring a lifetime of enjoyment for the proud owner. We'll bring your LP's to life, Starting at \$2000 for the WOW up to \$35,000 Ascona!

Contact us at Fidelis for details.

Stereophile: "This the smoothest running and/or best isolated conventional motor I've ever encountered at any price!." "..the Final Tool with it's solid construction, superb bearing, sophisticated electronic motor drive, provision for multiple tonearms, and a heavy, oversized, well damped platter might be the the best value out there" "..nothing at this price point compares in terms of built quality ."(Michael Fremer Stereophile)
